

4.3 RESULT AND ANALYSIS

1. Welcome Screen

The Welcome Screen of the My Tracker app is the first screen shown when the app is opened. It introduces the app's purpose, which is real-time vehicle tracking.

The screen displays the app name, tagline “Track Smarter. Drive Safer.”, and highlights key features like Real-Time Tracking, Instant Alerts, and Secure System.

A “Get Started” button is provided at the bottom, which allows the user to move to the Login Page and continue using the application.

2. Login Screen (Phone Number & OTP)

The Login Screen of the My Tracker app allows users to securely access the application using Phone Number and OTP verification.

The user is required to enter their mobile number in the input field and click on the “Send OTP” button. After receiving the OTP on their phone, the user must enter it in the provided field and click on the “Verify OTP” button.

This method ensures secure authentication without the need for passwords. Once the OTP is successfully verified, the user is redirected to the Profile Setup Screen to complete their details.

The Profile Setup Screen features a dark blue header with a white user icon. Below the header, a white rounded rectangle contains the title "Complete Profile". Underneath the title are two input fields: the first contains the text "Sejal" and the second contains "MH2610". At the bottom of the white rectangle is a dark blue button with the text "Save Profile".

3. Profile Setup Screen

The Profile Setup Screen is displayed after successful login in the My Tracker app. This screen is used to collect important user details required for tracking.

The user needs to enter their Name and Vehicle Number in the given input fields. These details help in identifying the user and their vehicle on the tracking map.

After entering the information, the user clicks on the “Save Profile” button. Once the data is saved successfully, the user is redirected to the Dashboard (Role Selection Screen).

4. Role Selection Dashboard

The Role Selection Dashboard appears after completing the profile setup in the My Tracker app. This screen allows the user to choose their role in the application.

Two options are provided:

- Admin
- User

The user selects one role based on their requirement. If Admin is selected, the user is redirected to the QR Generator Screen. If User is selected, the user proceeds to the QR Scanner and tracking process.

This role-based selection ensures proper functionality and separates admin and user operations within the app.

The Role Selection Dashboard has a dark blue header with the text "SELECT YOUR ROLE". Below the header are two selectable options: "ADMIN" with a shield icon and "USER" with a person icon. Below these options is a white rounded rectangle with the text "Welcome Sejal". At the bottom of this rectangle are two dark blue buttons: "ADMIN" and "USER".

5. Admin QR Generator Screen

The Admin QR Generator Screen is used by the admin to create a connection for tracking in the My Tracker app.

The admin enters a Vehicle ID in the input field and clicks on the “Generate QR Code” button. After clicking, a QR Code is generated and displayed on the screen.

This QR Code is then scanned by the user to establish a connection for location tracking. The screen may also include a “Go to Tracking Map” button, which allows the admin to view live user locations on the map.

6. Vehicle Scanner

The Vehicle Scanner Screen is the starting interface of the application that allows users to connect their vehicle to the tracking system. It provides a simple and user-friendly layout with a clear instruction to scan a QR code. The “Open Scanner” button enables the QR scanning functionality, which helps in identifying and linking the vehicle with the system.

If no vehicle is scanned, the system displays the message “No vehicle scanned yet” along with the status “Ready to connect.” This ensures that the user understands the current state of the application. The screen is designed to be minimal and intuitive so that users can quickly begin the tracking process without confusion.

7.Tracking Active Screen

The Tracking Active Screen is displayed once the vehicle has been successfully connected and tracking is enabled. This screen informs the user that their live location is currently being shared with the admin. It plays an important role in maintaining transparency between the user and the system.

The interface includes two main options: “Start Sharing Location” and “Stop Sharing Location.” These controls allow the user to manage their location sharing as per their requirement. A visual icon representing a vehicle and mobile connection enhances the understanding of the tracking feature. Overall, this screen ensures that users have full control over their privacy and tracking status.

8.Live Map Tracking Screen

The Live Map Tracking Screen provides a real-time view of the vehicle’s location using a map interface. It displays the exact position of the vehicle with the help of a marker, making it easy to track movement. This screen is essential for monitoring and navigation purposes.

Along with the map, detailed information is shown in a popup box, including the user name, vehicle number, connection status, current time, latitude, and longitude. These details help in identifying the vehicle and verifying its live position accurately. The integration with map services ensures smooth and precise tracking, making this feature highly useful for both users and administrators.
